

You are absolutely correct to call for an audit. A world-class physical data design must be exhaustively complete, and leaving declared structures to the imagination of the implementation team introduces the exact ambiguities the V1 Domain Specification and Ruthless Scope Cut were written to eliminate.

Below are the complete, exhaustive table definitions for the eight persistent structures that were identified in the entity inventory but not fully detailed in the initial physical data design. They are modeled with the exact same rigor, data typing, and constraints applied to fiscal_document.

1. Transmission & Integration Context

Table: transmission_record

Purpose: The append-only, exhaustively complete truth of every integration lifecycle regarding a specific payload. **Primary Key:** record_id (UUID)

Column Name	Data Type	Nullable	Default	Constraints/Notes
record_id	UUID	No	gen_random_uuid()	Primary Key.
target_identity	UUID	No	-	Pointer to fiscal_document, invalidation_event, or contingency_episode.
target_type	VARCHAR(30)	No	-	'Document', 'Invalidation', or 'Contingency'.
lifecycle_status	VARCHAR(30)	No	'OPEN'	Open, Terminal_Accepted, Terminal_Rejected, Exhausted.
created_at	TIMESTAMPTZ	No	NOW()	Lifecycle start time.

updated_at	TIMESTAMPTZ	No	NOW()	Last state change.
------------	-------------	----	-------	--------------------

Table: transmission_attempt

Purpose: A single verifiable send/receive interaction with the tax authority API. **Primary Key:** attempt_id (UUID)

Column Name	Data Type	Nullable	Default	Constraints/Notes
attempt_id	UUID	No	gen_random_uuid()	Primary Key.
record_id	UUID	No	-	FK to transmission_record.
attempt_sequence	INTEGER	No	-	Strictly monotonic (1, 2, 3...) per record.
attempt_timestamp	TIMESTAMPTZ	No	NOW()	Exact time of network request.
request_payload	BYTEA	No	-	Exact byte structure sent.
response_payload	BYTEA	Yes	-	Exact byte structure received. Null if network timeout.
network_error	TEXT	Yes	-	Exception details if unreachable.

interpreted_outcome	VARCHAR(30)	No	-	Success, Rejected, ContingencySignal, Timeout, AuthorityError.
observations	JSONB	Yes	-	Array of string messages/codes parsed from MH response.

2. Configuration Context

Table: issuer_configuration

Purpose: The central singleton definition of the legal entity running the software. **Primary Key:** configuration_id (UUID)

Column Name	Data Type	Nullable	Default	Constraints/Notes
configuration_id	UUID	No	gen_random_uuid()	Primary Key.
legal_name	VARCHAR(255)	No	-	Official business name.
nit	VARCHAR(20)	No	-	Tax ID.
nrc	VARCHAR(20)	No	-	Registration Number.
economic_activity_code	VARCHAR(10)	No	-	MH Catalog 019.
address	JSONB	No	-	Structured location.
contact_info	JSONB	No	-	{ "phone": "...",

				"email": "..."}.
certificate_reference	VARCHAR(255)	No	-	Vault/URI pointer. NEVER raw material.
credentials_reference	VARCHAR(255)	No	-	Vault/URI pointer for MH API auth.
singleton_guard	BOOLEAN	No	TRUE	DB constraint: CHECK (singleton_guard = TRUE). Enforces 1 row maximum.

Table: establishment

Purpose: Represents an MH-registered physical or logical place of business (Sucursal/Casa Matriz). **Primary Key:** establishment_id (UUID)

Column Name	Data Type	Nullable	Default	Constraints/Notes
establishment_id	UUID	No	gen_random_uuid()	Primary Key.
configuration_id	UUID	No	-	FK to issuer_configuration.
establishment_code	VARCHAR(4)	No	-	E.g., '0001'. Unique within issuer.
establishment_type_code	VARCHAR(2)	No	-	Cat-009 (e.g., '01', '02').
name	VARCHAR(100)	No	-	Descriptive

				name.
address	JSONB	No	-	Structured physical location.

Table: point_of_sale

Purpose: The logical generation nodes nested under an establishment. Scopes control numbers. **Primary Key:** pos_id (UUID)

Column Name	Data Type	Nullable	Default	Constraints/Notes
pos_id	UUID	No	gen_random_uuid()	Primary Key.
establishment_id	UUID	No	-	FK to establishment.
pos_code	VARCHAR(4)	No	-	Unique within Establishment.
description	VARCHAR(100)	No	-	Logical name.
is_active	BOOLEAN	No	TRUE	Soft-delete toggle.

3. Master Data Context (Catalog & Parties)

Table: counterparty

Purpose: Reusable master data for document receptors. Highly mutable, but mutations NEVER cascade to signed documents. **Primary Key:** counterparty_id (UUID)

Column Name	Data Type	Nullable	Default	Constraints/Notes
counterparty_id	UUID	No	gen_random_uuid()	Primary Key.

taxpayer_kind	VARCHAR(30)	No	-	'FinalConsumer', 'Contribuyente', etc.
tax_identity_string	VARCHAR(20)	Yes	-	DUI, NIT, or NRC.
legal_name	VARCHAR(255)	No	-	Core identity.
commercial_name	VARCHAR(255)	Yes	-	Optional branding.
economic_activity_code	VARCHAR(10)	Yes	-	Cat-019. Mandatory for CCF targets.
economic_activity_desc	TEXT	Yes	-	Descriptive string.
contact_info	JSONB	Yes	-	{ "phone": "...", "email": "..."}.
address	JSONB	Yes	-	Structured location.
is_active	BOOLEAN	No	TRUE	Soft-delete flag.

Table: item

Purpose: Reusable product/service master data. Drives defaults during draft composition.

Primary Key: item_id (UUID)

Column Name	Data Type	Nullable	Default	Constraints/Notes
item_id	UUID	No	gen_random_uuid()	Primary Key.

internal_sku	VARCHAR(50)	Yes	-	Custom internal catalog code.
description	VARCHAR(255)	No	-	Human readable.
default_unit_price	NUMERIC(18,4)	No	0.0000	Must be >= 0.
unit_of_measure_code	VARCHAR(10)	No	-	MH mapped unit.
item_type_code	VARCHAR(2)	No	-	Cat-011 (e.g., Goods/Services).
default_tax_behavior	VARCHAR(20)	No	-	Determines default tax routing.
is_active	BOOLEAN	No	TRUE	Soft-delete flag.

4. Evidence Context

Table: evidence_bundle

Purpose: The immutable, write-once parent container vault for all artifacts related to exactly one Signed Fiscal Document. **Primary Key:** bundle_id (UUID)

Column Name	Data Type	Nullable	Default	Constraints/Notes
bundle_id	UUID	No	gen_random_uuid()	Primary Key.
document_id	UUID	No	-	Unique pointer to fiscal_document

				nt.
created_at	TIMESTAMPTZ	No	NOW()	Timestamp of document signing.

(Note: The evidence_artifact table definition mapping to this bundle was fully defined in Section 8 of the previous output and remains accurate).
